

Ballot Question Website
Programming and Web Development
October 21, 2014
Mr. Lambert

For this assignment, you will be designing and developing a website that takes a position on one of the questions that will be on the ballot during the upcoming election. Visit the Massachusetts Secretary of State's website and read about the four ballot questions. The site contains links to arguments that are both in favor of and against the passage of each of the questions.

The URL for the site is: <http://www.sec.state.ma.us/ele/ele14/pip14idx.htm>

Once you have read the statements written by the proponents of each point of view; select one of the questions and develop a webpage this is either in support of or opposed to the passage of the question.

Your webpage should include pictures, links and other HTML elements that enhance the presentation of your viewpoint. You should make use of CSS in order to improve the look and feel of the page you develop.

As always, your page should be well thought out and developed.
